

Process analysis

Process management will change the organizational approach of a company

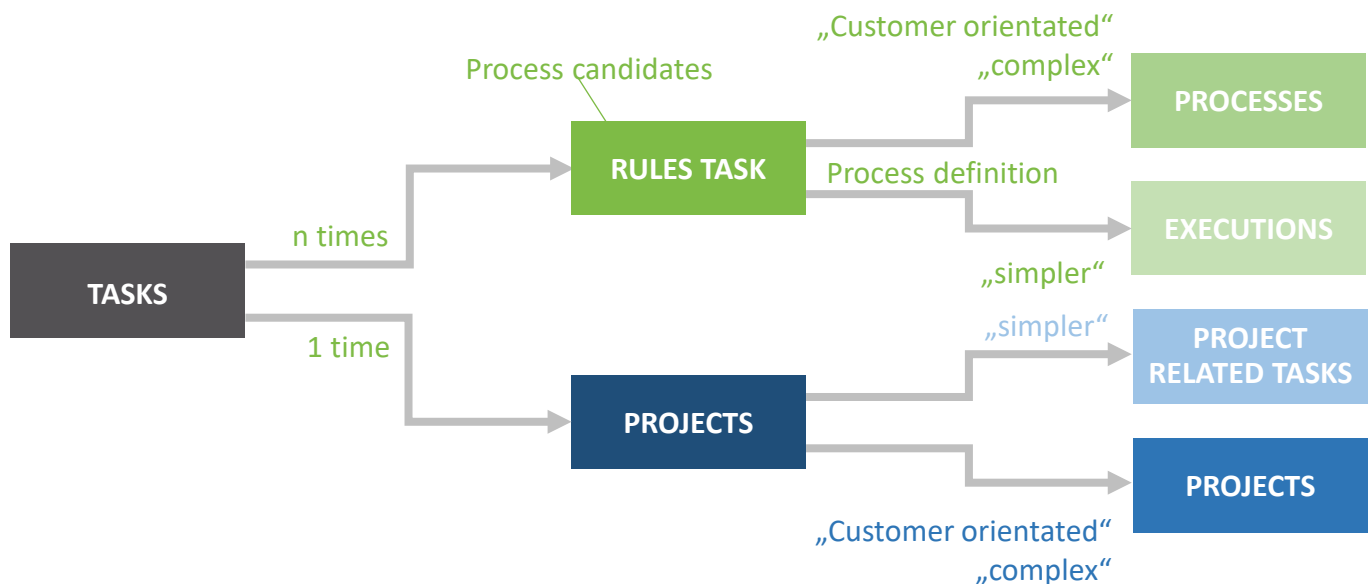

Consulting approach in process analyses:

- definition of the starting point
- survey of the actual state
- definition of the goals for the analysis
- development of recommendations for action
- preparation of a process overview (individual and entire processes)

Attendance during the process analysis:

- for the major operational processes
- attendance during the survey of processes
- attendance during process modelling
- attendance during the development of recommendations for action
- attendance during the realization of potentials for optimization

Survey of the actual state of procedures and processes

Order and scope of an analysis

- selection and analysis of selected processes
- survey of the actual processes
- input/output situation of the processes
- goals of the process
- tools for the process

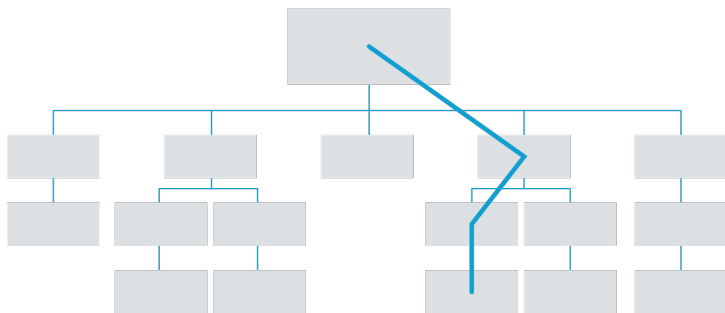

Process analysis

Survey of the actual state of procedures and processes

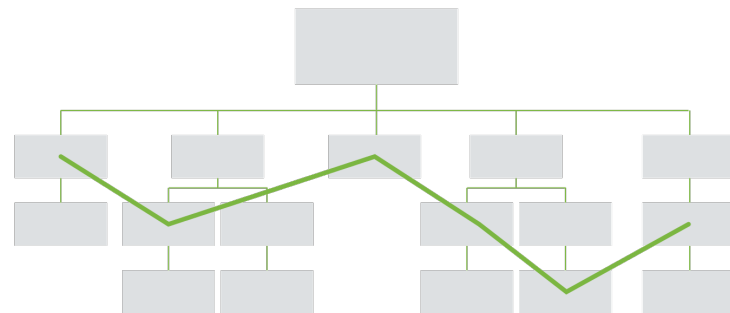

- Project planning
- Attendance during the process analysis
- Planning and carrying out of the analysis workshops
- Planning and carrying out of the process modelling workshops (software ARIS)
- Consulting regarding the identification of potentials for optimization and regarding the development of recommendations for action
- Consulting regarding the visualization of the process

Process management leads to a change in the organizational approach of the company. It is an interaction of...
